

L_1 : Distancia de Manhattan (von Neumann)

$$d_1(\mathbf{x}, \mathbf{y}) = |x_1 - y_1| + |x_2 - y_2|$$

L_2 : Distancia Euclídea

$$d_2(\mathbf{x}, \mathbf{y}) = \sqrt{(x_1 - y_1)^2 + (x_2 - y_2)^2}$$

L_∞ : Distancia de Chebyshev (Moore)

$$d_\infty(\mathbf{x}, \mathbf{y}) = \max(|x_1 - y_1|, |x_2 - y_2|)$$
